

5 **SYSTEM AND METHOD FOR INFORMATION HANDLING SYSTEM
MULTIMEDIA MODE BOOT OPTIMIZATION**

Adolfo S. Montero

Muhammed K. Jaber

ABSTRACT OF THE DISCLOSURE

10 An information handling system selectively boots to a normal operation mode
having devices and applications configured to operate normally or a multimedia
operation mode having devices and applications that support presentation of
multimedia information enabled and other devices and applications disabled. In one
embodiment, the multimedia mode improves portable information handling system
15 multimedia performance by reducing power consumption to improve battery charge
life and by reducing boot time to improve the timeliness of the user experience. For
instance, a multimedia module interfaces with the operating system to disable power
up of non-multimedia devices, such as networking devices, and non-multimedia
applications, such as antivirus applications, while enabling multimedia devices, such
20 as a DVD disc drive, to display multimedia information, such as a DVD movie.
